PROFILE

I am a computer information systems (CIS) student with a keen interest in web development and AI. Exploring the world of coding and software has been an exciting journey during my studies and training. My passion lies in mastering the principles of computer science while applying them practically through real world projects. Striving to enhance my skills, I aim to create engaging and innovative platforms and cutting-edge technology, blending creativity with technology.

EXPERIENCE

Trainee

Orange Coding Academy   2023/Jun - 2023 /Nov

I attended an intensive 5-month web development bootcamp, immersing myself in a comprehensive curriculum that encompassed a wide range of technologies and tools. During this immersive program, I gained valuable hands-on experience and expertise in various aspects of web development:

- HTML, CSS, and JavaScript: Mastered the fundamentals of building the structure, style, and interactivity of modern web applications.
- PHP and Laravel: Acquired proficiency in server-side programming using PHP and utilized the Laravel framework to develop robust and scalable web applications.
- React and Redux: Developed a deep understanding of building dynamic and interactive user interfaces using React.js and state management with Redux.

As part of my graduation project, I conceptualized, designed, and developed a full-fledged auction house website. The project showcased my comprehensive understanding of web development concepts and technologies.
And it not only demonstrated my technical skills and problem-solving abilities but also showcased my ability to deliver a functional and user-friendly application, meeting the requirements of a dynamic online auction platform.
